Measuring the Digital Transformation

A ROADMAP FOR THE FUTURE

Automation. Globalization. Climate change and ever higher demands on technical expertise. Conditions in the labor market are changing rapidly - and thus the knowledge and skills required to get a job. It also means that the school has to change. Jan Hylén, SE

Artificial Intelligence: A European Perspective

Abstract:

We are only at the beginning of a rapid period of transformation of our economy and society due to the convergence of many digital technologies. Artificial Intelligence (AI) is central to this change and offers major opportunities to improve our lives. The recent developments in AI are the result of increased processing power, improvements in algorithms and the exponential growth in the volume and variety of digital data. Many applications of AI have started entering into our every-day lives, from machine translations, to image recognition, and music generation, and are increasingly deployed in industry, government, and commerce. Connected and autonomous vehicles, and AI-supported medical diagnostics are areas of application that will soon be commonplace. There is strong global competition on AI among the US, China, and Europe. The US leads for now but China is catching up fast and aims to lead by 2030. For the EU, it is not so much a question of winning or losing a race but of finding the way of embracing the opportunities offered by AI in a way that is human-centred, ethical, secure, and true to our core values. The EU Member States and the European Commission are developing coordinated national and European

Educational Research and Innovation

Fostering Students' Creativity and Critical Thinking

WHAT IT MEANS IN SCHOOL

Creativity and critical thinking are key skills for complex, globalised and increasingly digitalised economies and societies. While teachers and education policy makers consider creativity and critical thinking as important learning goals, it is still unclear to many what it means to develop these skills in a school/educational settings.

OUR THESES DEFINING THE AIM FOR LIFELONG LEARNING

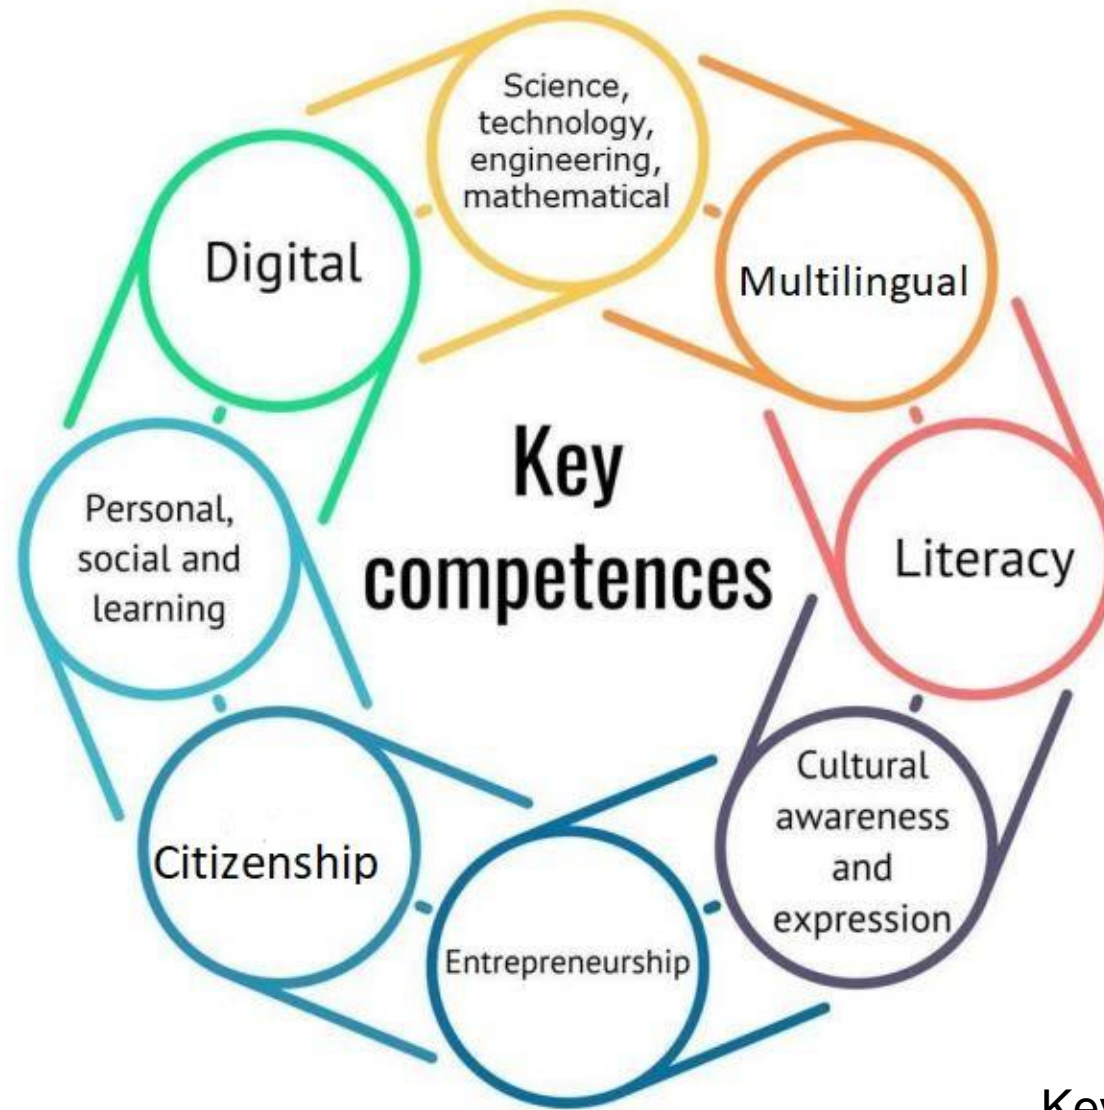

2.
General knowledge, basic
skills and competence are the
foundations of well-being

3.
Competence improves
working life and working life
improves competence

1.
Everyone
learns
throughout
their life

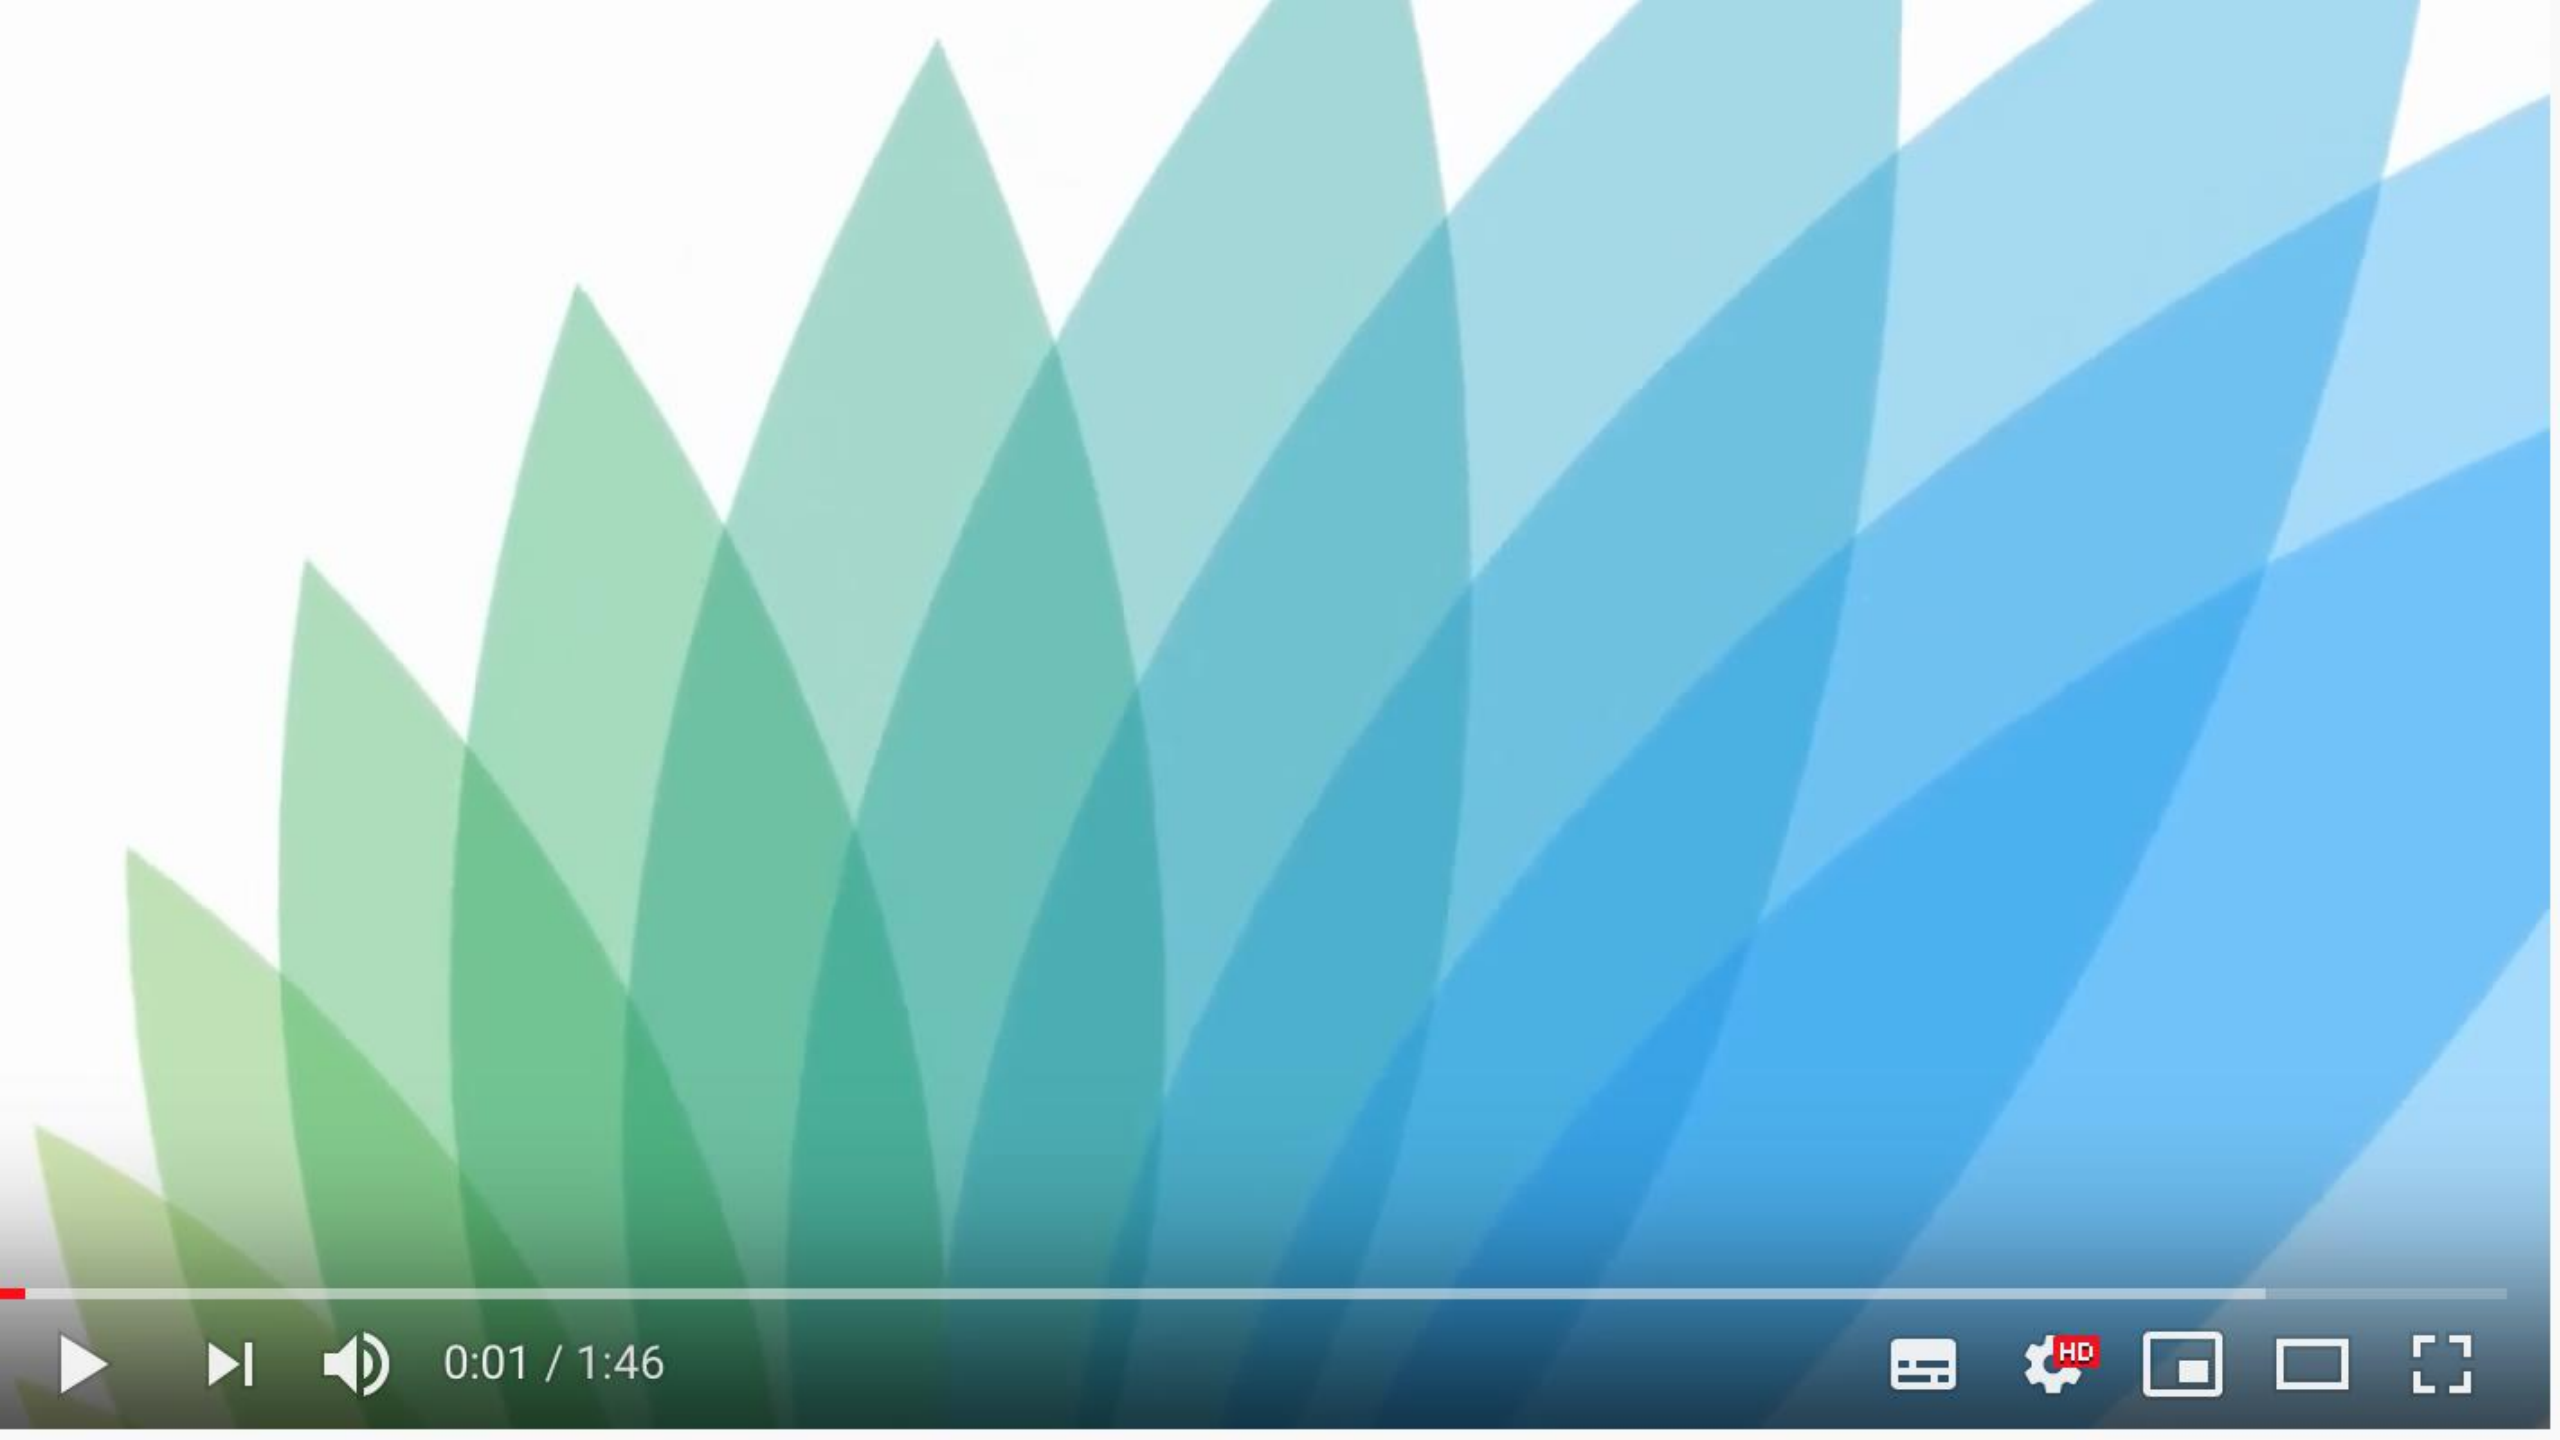

4.
Finland's success is
based on competence

Key skills for lifelong learning (EU):

SITRA FI emphasises even other essential basic skills with a view to LLL, p 34

- Efficacy, thinking skills
- Community skills and the ability to take care of one's functional ability and work ability.
- Thinking skills are part of the transversal competence that a pupil needs in the management, use and application of information and in the creation of new knowledge, problem-solving, logical thinking and decision-making.

Learning and Skills for the Digital Era

Learning and skills are key contributors to society and the economy. As modern societies and economies are changing due to, amongst others, globalisation and technological progress, a fundamental transformation of education and training (E&T) throughout Europe is required to deliver the knowledge and skills needed for growth, employment and participation in society.

This forms an important part of the Europe 2020 agenda and its various flagships and policy initiatives.

JRC research in this area started in 2005 and is focused on how to make better use of ICT for rethinking learning, for innovating education and training and for addressing new skills requirements (e.g. digital competence) to generate growth, employment and social inclusion. More than 20 major studies have been undertaken and more than 100 different publications released.

European Framework for the Digital Competence of Educators: DigCompEdu

Abstract:

DigComp 2.1 is a further development of the Digital Competence Framework for Citizens. Based on the reference conceptual model published in DigComp 2.0, we present now 8 proficiency levels and examples of use applied to the learning and employment field.

Educators' professional competences

Educators' pedagogic competences

Learners' competences

Digital competences

Transversal competences

Subject specific competences

Subject specific competences

1

Professional Engagement

- Organisational communication
- Professional collaboration
- Reflective practice
- Digital CPD

2

Digital Resources

- Selecting
- Creating & modifying
- Managing, protecting, sharing

3

Teaching and Learning

- Teaching
- Guidance
- Collaborative learning
- Self-regulated learning

4

Assessment

- Assessment strategies
- Analysing evidence
- Feedback & planning

5

Empowering Learners

- Differentiation & personalisation
- Accessibility & inclusion
- Actively engaging learners

6

Facilitating Learners' Digital Competence

- Information & media literacy
- Communication
- Content creation
- Responsible use
- Problem solving

What do we mean by quality

Compliance and consumer protection

Quality enhancement and process
improvements

Reputation

The SIMPLE answer:

Quality is in the eye of the
beholder

The COMPLEX answer:

Quality, one size not fit all

THE SAMR MODEL
